NEW EMBROIDERY LOOK

TuftMaster®

ZSK StitchTuft®

Pile height between 2 und 5 mm

StitchTuft® is a fantastic soft, though stable cut pile.

Tufting is a process of inserting pile yarn into a backing material, originating back to colonial times in the United States where early settlers started crafting fabrics containing warming piles.

Today Tufting is mostly associated with carpet production. After each penetration of the needle a loop is formed. By cutting those loops, piles become a velour.

ZSK StitchTuft® is very similar to velour. Depending on the chosen yarn, pile height and pile density the look & feel can be designed according to ones individual liking.
